

## TABLE OF CONTENTS

CHAPTER 1. BRIEF INTRODUCTION TO LINEAR FORMS IN LOGARITHMS . . . . .	1
1. <i>Linear forms in complex logarithms</i> . . . . .	1
2. <i>Linear forms in <math>p</math>-adic logarithms</i> . . . . .	5
3. <i>Linear forms in elliptic logarithms</i> . . . . .	6
CHAPTER 2. LOWER BOUNDS FOR LINEAR FORMS IN COMPLEX AND $p$ -ADIC LOGARITHMS	7
1. <i>Lower bounds for linear forms in complex logarithms</i> . . . . .	7
2. <i>Multiplicative dependence relations between algebraic numbers</i> . . . . .	14
3. <i>Lower bounds for linear forms in <math>p</math>-adic logarithms</i> . . . . .	14
4. <i>Notes</i> . . . . .	18
CHAPTER 3. FIRST APPLICATIONS . . . . .	19
1. <i>On the distance between powers of 2 and powers of 3</i> . . . . .	19
2. <i>Effective irrationality measures for quotients of logarithms of integers</i> . . . . .	20
3. <i>On the distance between two integral <math>S</math>-units</i> . . . . .	21
4. <i>Effective irrationality measures for <math>n</math>-th roots of algebraic numbers</i> . . . . .	22
5. <i>On the greatest prime factor of values of integer polynomials</i> . . . . .	23
6. <i>On the greatest prime factor of terms of linear recurrence sequences</i> . . . . .	25
7. <i>Perfect powers in linear recurrence sequences</i> . . . . .	27
8. <i>Simultaneous Pellian equations and Diophantine quadruples</i> . . . . .	30
9. <i>On the representation of integers in distinct bases</i> . . . . .	33
10. <i>Further applications (without proofs)</i> . . . . .	36
<i>Exercises</i> . . . . .	37
12. <i>Notes</i> . . . . .	38
CHAPTER 4. CLASSICAL FAMILIES OF DIOPHANTINE EQUATIONS . . . . .	41
1. <i>Proof of Baker's theorem 1.10</i> . . . . .	41
2. <i>The unit equation</i> . . . . .	44
3. <i>The Thue equation</i> . . . . .	45
4. <i>Effective improvement of Liouville's Inequality</i> . . . . .	48

5. <i>The superelliptic and hyperelliptic equations</i>	48
6. <i>The Diophantine equation <math>x^2 + C = y^n</math></i>	50
7. <i>Perfect powers at integer values of polynomials</i>	53
8. <i>The Catalan equation and the Pillai conjecture</i>	54
9. <i>Exercises</i>	57
10. <i>Notes</i>	57
CHAPTER 5. FURTHER APPLICATIONS	59
1. <i>Effective irrationality measures for quotients of logarithms of rational numbers</i>	59
2. <i>Effective irrationality measures for <math>n</math>-th roots of rational numbers</i>	60
3. <i>The Thue equation <math>ax^n - by^n = c</math></i>	61
4. <i>A generalization of Diophantine quadruples</i>	63
5. <i>Exercises</i>	64
6. <i>Notes</i>	64
CHAPTER 6. APPLICATIONS OF LINEAR FORMS IN $p$ -ADIC LOGARITHMS	65
1. <i>On the <math>p</math>-adic distance between two integral <math>S</math>-units</i>	65
2. <i>Waring's problem</i>	66
3. <i>On the <math>b</math>-ary expansion of an algebraic number</i>	67
4. <i>Repunits and perfect powers</i>	69
5. <i>Perfect powers with few binary digits</i>	70
6. <i>The <math>S</math>-unit equation</i>	72
7. <i>The Thue–Mahler equation and other classical equations</i>	74
8. <i>Perfect powers in binary recurrence sequences</i>	75
9. <i>Perfect powers as sum of two integral <math>S</math>-units</i>	76
10. <i>On the digital representation of integral <math>S</math>-units</i>	77
<i>Exercises</i>	79
12. <i>Notes</i>	80
CHAPTER 7. PRIMITIVE DIVISORS AND THE GREATEST PRIME FACTOR OF $2^n - 1$	83
1. <i>Primitive divisors</i>	83
2. <i>Primitive divisors of Lucas–Lehmer sequences</i>	86
3. <i>The Diophantine equation <math>x^2 + C = y^n</math>, continued</i>	89
4. <i>On the number of solutions to the Diophantine equation <math>x^2 + D = p^n</math></i>	89
5. <i>On the greatest prime factor of <math>2^n - 1</math></i>	90
6. <i>Exercises</i>	93
7. <i>Notes</i>	93

CHAPTER 8. THE <i>abc</i> -CONJECTURE . . . . .	95
1. <i>Effective results towards the abc-conjecture</i> . . . . .	95
2. <i>Proofs of Theorems 8.2 and 8.3</i> . . . . .	96
3. <i>Exercise</i> . . . . .	101
4. <i>Notes</i> . . . . .	101
CHAPTER 9. SIMULTANEOUS LINEAR FORMS IN LOGARITHMS AND APPLICATIONS	103
1. <i>A theorem of Loxton</i> . . . . .	103
2. <i>Perfect powers in short intervals</i> . . . . .	104
3. <i>Simultaneous Pellian equations with at most one solution</i> . . . . .	107
4. <i>Exercise</i> . . . . .	108
5. <i>Notes</i> . . . . .	108
CHAPTER 10. MULTIPLICATIVE DEPENDENCE RELATIONS BETWEEN ALGEBRAIC NUMBERS . . . . .	109
1. <i>Lower bound for the height of an algebraic number</i> . . . . .	109
2. <i>Existence of small multiplicative dependence relations</i> . . . . .	111
LOWER BOUNDS FOR LINEAR FORMS IN TWO COMPLEX LOGARITHMS: PROOFS . . . . .	115
1. <i>Three estimates for linear forms in two complex logarithms</i> . . . . .	115
2. <i>An auxiliary inequality involving several parameters</i> . . . . .	116
3. <i>Proof of Theorem 11.4</i> . . . . .	117
4. <i>Deduction of Theorem 11.1 from Theorem 11.4</i> . . . . .	121
5. <i>Deduction of Theorem 11.2 from Theorem 11.4</i> . . . . .	123
CHAPTER 12. LOWER BOUNDS FOR LINEAR FORMS IN TWO <i>p</i> -ADIC LOGARITHMS: PROOFS	125
1. <i>Three estimates for linear forms in two <i>p</i>-adic logarithms</i> . . . . .	125
2. <i>Two auxiliary inequalities involving several parameters</i> . . . . .	126
3. <i>Proofs of Theorems 12.4 and 12.5</i> . . . . .	128
4. <i>Deduction of Theorem 12.1 from Theorem 12.4</i> . . . . .	134
5. <i>Deduction of Theorem 12.2 from Theorem 12.5</i> . . . . .	136
6. <i>Deduction of Theorem 12.3 from Theorem 12.1</i> . . . . .	137
CHAPTER 13. OPEN PROBLEMS . . . . .	139
1. <i>Classical conjectures in transcendence theory</i> . . . . .	139
2. <i>Diophantine equations</i> . . . . .	140
3. <i>Miscellaneous</i> . . . . .	143

APPENDIX A. APPROXIMATION BY RATIONAL NUMBERS . . . . .	147
APPENDIX B. HEIGHTS . . . . .	151
1. <i>Definitions</i> . . . . .	151
2. <i>The Liouville inequality</i> . . . . .	155
3. <i>Linear forms in one <math>p</math>-adic logarithm</i> . . . . .	156
APPENDIX C. AUXILIARY RESULTS ON ALGEBRAIC NUMBER FIELDS . . . . .	159
1. <i>Real quadratic fields and Pellian equations</i> . . . . .	159
2. <i>Algebraic number fields</i> . . . . .	160
APPENDIX D. CLASSICAL RESULTS ON PRIME NUMBERS . . . . .	163
APPENDIX E. A ZERO LEMMA . . . . .	165
APPENDIX F. TOOLS FROM COMPLEX AND $p$ -ADIC ANALYSIS . . . . .	167
1. <i>The Schwarz lemma in complex analysis</i> . . . . .	167
2. <i>Auxiliary results on <math>p</math>-adic fields</i> . . . . .	167
3. <i>The Schwarz lemma in <math>p</math>-adic analysis</i> . . . . .	169
BIBLIOGRAPHY . . . . .	171
